

## Economic mobilities

Organizer: Päivi Oinas (paivi.oinas@utu.fi), Turku School of Economics, University of Turku

While geographers tend to study eg local and regional economies, economic activity is seldom spatially bound but is constantly on the move. Goods, services, finances, people, ideas, interactions, plans, aspirations – all the forces that keeps the economy moving – constantly cross geographical boundaries at all scales.

Papers are called for that analyze these economic mobilities, thereby helping us understand the internationally and globally connected, and thereby easily volatile, nature of the spatially bound economies.

Presentations in this session will be oral presentations.
